

## Tuning Your Vehicle Management System

proxia VMS|E

**With proxia VMS|E, your VMS will be intuitive, mobile, and agile. Your business partners and workforce will love it!**

The SAP® Vehicle Management System (VMS) provides support for vehicle procurement, sales and logistics, and allows various stakeholders to carry out a range of different tasks on the same system. The comprehensive system supports all sub-processes and manages all vehicle data. The following questions often arise in our day-to-day business:

- How can I connect better with my business partner?
- How do I display only the data I need?
- How do I achieve my goal with fewer clicks?
- How can I transform to mobile processes?
- How can I implement VMS quicker?

proxia VMS|E has the answers.

Complex processes are simplified and made more intuitive with the process performance package for SAP VMS. The state-of-the-art web interface with graphical elements and the role-oriented navigation gets you to your desired goal with fewer clicks.

You can configure your VMS access rights specifically for different user groups and specify who can see which data and who is permitted to perform which actions.

Your business partners, such as insurance or transport companies, can enter data directly, at any stage of the process, such as delivering vehicles to the dealer. You decide which data and actions are released when.

User-oriented process management is achieved via simplified navigation. Data and actions are clear presented as required by the workflow, and your workforce will be unburdened from any redundant workflow steps.

You can also access the VMS mobile. Whether from a tablet, smartphone or scanner, the VMS is accessible at any stage of the process as required, and data are promptly updated.

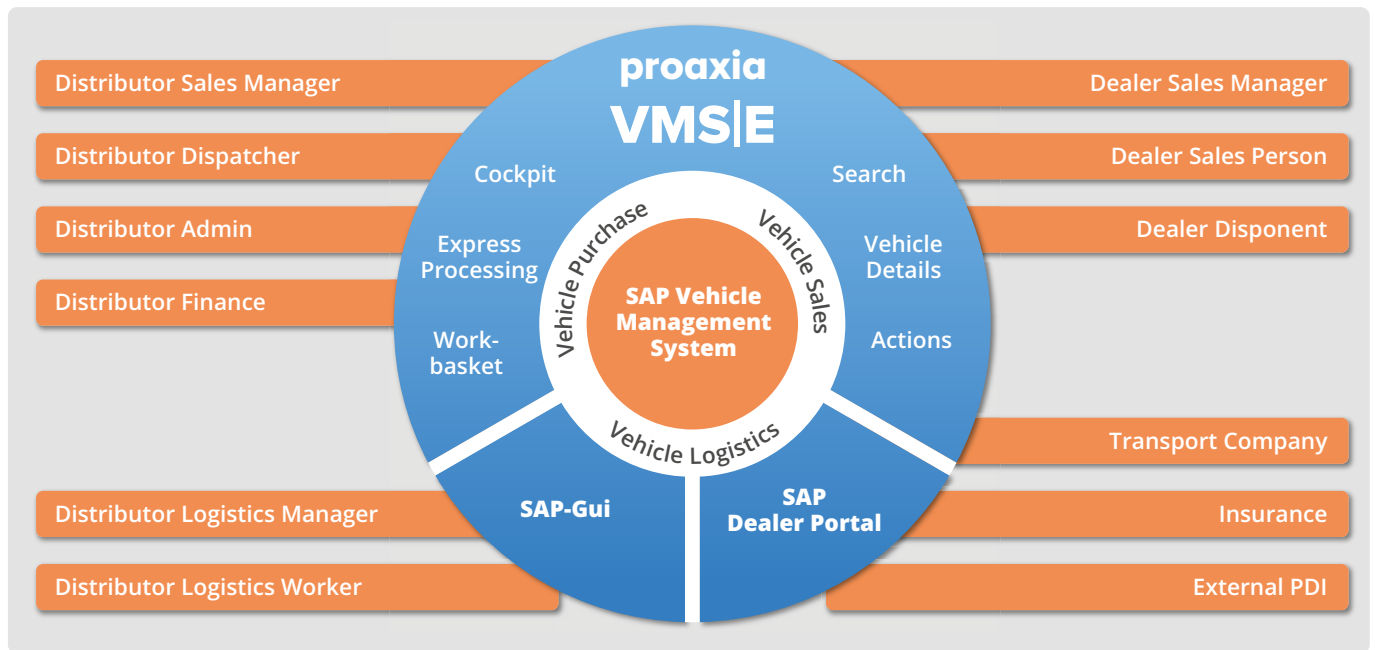

Nearly all pre-existing, company-specific and new VMS actions are integrated via the extension without the need for programming work, and you can react flexible to process adjustments.

### How You Benefit from proxia VMS|E

The extension offers a number of advantages in terms of process optimization and acceptance from your business partners and workforce, both for existing VMS applications as well as complete new implementation.

- User-centric process design
- Improved process performance through efficient work environment
- Transparent processes via straightforward assignment of work packages
- High acceptance level in business units thanks to excellent ease of use
- Low training requirements
- Easy integration of external business partners with limited access to data and functions
- Configuration of vehicle modification actions without programming
- Use of VMS on mobile devices

## Core processes proaxia VMS|E

proaxia VMS|E allows you to design the user interfaces from the perspective of the operator for all processes. You can configure process and role-specific views on the VMS with overviews, work baskets and activities. The user will only see what they need for their task.

### Cockpit

Overview of selected work baskets with status display including alerts. You can set the threshold which, if exceeded, will trigger an alert. With this way, your workforce will always master their individual processes easily and will be able to prioritize their tasks.

- Relevant work baskets in an overview
- Status display with automatic update
- Warning message when threshold exceeded

### Work Basket

Role-specific presentation of work baskets in various processes supports responsibilities and process transparency.

- Clear default criteria
- Field layout and selection

### Express Processing

Fast processing of iterative activities.

- One-time process definition
- Identification of vehicle and confirmation of action

### Role-Specific Interfaces

Interfaces for certain roles in the company with defined access to search functions, vehicle data and actions. • Vehicle search, display and history • Selection and structuring of fields

- Sorting of output lists
- Display of relevant actions

### Front-End for Actions

Configurable screens for SAP standard actions and custom actions.

- Layout displayed fields and selection
- Default values
- Explanatory texts
- Mandatory fields

### Generic Vehicle Change Action

Configuration of vehicle change actions without the need for programming, taking into account vehicle fields, attributes, qualifiers and customized fields.
